

## COVID 19-SANITIZING

COVID-19 has caused havoc around the world. Sanitizing and disinfecting are important to protect the health of your employees as well as your customers. With lock down level 4 to be eased into from 1 May 2020

and the other levels to follow subsequently, it is now the time to make offices hygienically clean before the workforce returns. This will show that you care about your employees and will also help flatten the curve.

Sanitizing and disinfecting eliminate viruses, bacteria and germs in commercial areas, food establishments and residential properties. Make sure you clean and protect the health of your staff, customers and yourself against Covid-19. All products are safe to use at food establishments, retirement villages, residential and commercial properties.

I am currently serving as the Vice-President of the South African Pest Control Association and are ready to help you to fulfil your obligation to your staff and customers alike. Please contact me, Johan Fourie, on 0824971496 to discuss how we can assist you in this regard.

We are registered with the Department of Agriculture and are looking forward to helping you. E-mail us at [johan@borerbeetles.co.za](mailto:johan@borerbeetles.co.za) or call us at the above number. Don't let Covid-19 hamper your business.
